It's worth taking a closer look at eggs: compare the eggs of birds, reptiles (including prehistoric reptiles!), amphibians, fish, insects and even mammals; find out how eggs are used in cooking, the sciences, architecture and design; see egg-inspired works of art and also meet people who'd rather stay as far away from eggs as possible...

## The Wild Book of Wild Boar and Their Cousins

But that's not all – the boar are accompanied by their cousins, like the well-loved warthog or the domestic pig, who is perhaps the cleverest and most sensitive of all animals known to us.

## Wild Guides. Animals in Myths, Fairy Tales and Legends

Text: Joanna Wajs

Illustrator: Jola Richter-Magnuszewska

This magical, mysterious book presents more than fifty animals and their role in myths, and legends. The traditional stories from around the world show their importance to human and divine lives and immerses the reader into the bewildering world of folk tales. The imagination of ancient peoples was largely populated by animals – close as a mother and father and, at the same time, as mysterious as fire, ocean and lightning. They taught people compassion, courage and justice, and also respect for every living being. Under the impermeable cloak of myth and fairy tale, they bridged the heavens and the earth and passed on the truth about the shared fate of all beings, about the changing of the seasons, as well as about joy and pain, life and death.

*Map of the Future* is an amazing concertina-shaped book. You can browse the book page by page, or spread it out on the floor to follow the adventures of the main characters.

During a school experiment, Gabby and Bertie accidentally open a time travel portal. The portal sucks everything in, all of class 3A and various objects from the classroom. On the map, you not only have to find all of the pupils, but also parts of a spaceship, a crusty old croissant and a dust brush... and a few more things (though no one is going to miss 3A's class register!)
